

Meltemi Door Curtains

The range of SABIANA

Meltemi door curtains offers maximum flexibility in the protection of doors and open access compartments. By connecting the door curtain modules, the openings can be protected with a continuous system and an uninterrupted door curtain.

This range of high speed door curtains can protect against the entrance of cold air streams in the winter, the loss of cooled air in the summer and the effects of dust and pollution, maintaining the ambient air clean and in the desired conditions.

Furthermore, the systems can also be used to protect the areas dedicated to refrigeration so as to reduce the loss of cold air.

The use of high speed fans allows the installation of the door curtains even in areas where food is prepared, to prevent the entrance of insects.

In essence, SABIANA offers a protection solution wherever there is the need to open a door.

Cabinet

It consists of cold galvanised steel plate panels painted with oven-dried epoxy powders, colour RAL 9003. The side closures are made of plastic.

Fan assembly

LU/LU-ECM Models:

made up of plastic tangential fans installed on a rubber support with rolling bearing and coupled with the electric motor mounted on the structure side.

LC/LI Models:

it consists of double inlet centrifugal fans directly fitted on the motor shaft.

Electric motor

LU/LC/LI Models:

single-phase motor with capacitor inserted permanently, automatic reset internal thermal protection, class of protection IP 20. Power supply voltage 230V - 50Hz. Two speeds are available.

LU-ECM Model:

three phase permanent magnet brushless electronic motor that is controlled with reconstructed current according to a BLAC sinusoidal wave.

The inverter board that controls the motor operation is powered by 230 Volt, single-phase and, with a switching system, it generates a three-phase frequency modulated, wave form power supply.

The electric power supply required for the machine is therefore single-phase with voltage of 230 - 240 V and frequency of 50 - 60 Hz.

Coil (W versions with hot water)

The "W series" units are complete with a water coil (for heating only), made with copper pipes with aluminium fins bonded to the pipes by mechanical expansion.

LU/LU-ECM models are equipped with 1 row coil, **LC/LI** models are equipped with 2 row coils.

Maximum water temperature 80°C, maximum operating pressure 10 bar.

Electric resistance (E versions)

The "E series" units come with filament electric resistances supported by mica spacers, with external bearing structure made of galvanised sheet.

Selecting the correct door curtain

The quantity of air that passes through an open door depends on three main factors:

- the difference in pressure between the indoor environment and the outdoor
- the temperature difference
- the wind speed

Simplifying these phenomena, we can say that an air stream will pass through the door if the indoor conditions, in terms of temperature, pressure and air speed, are different from the outdoor conditions.

The air streams are therefore generated by the natural trend to make the pressure and temperature uniform between two joining environments.

In a heated environment, the hot air will leave the environment to be replaced by cold air.

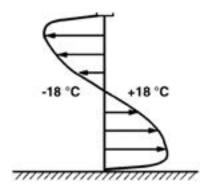

In the presence of wind, the currents of air through opening will be increased.

Indoor/Outdoor Pressure

The difference in pressure between the environment and the surrounding space can be eliminated by controlling the ventilation system that neutralises the difference between the indoor and outdoor pressure.

Air flow generated by differences in temperature (Q₊)

The hot air inside is less dense, and consequently lighter, than the cold outside air, and therefore a difference in pressure is created through an open door. The cold outdoor air flows through the bottom of the opening and pushes the hot air from the indoor environment to the outdoor, through the top of the opening.

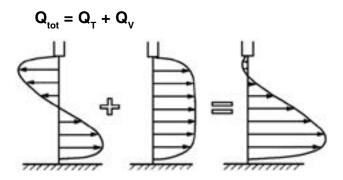

The air flow varies according to the temperature difference between the inside and the outside.

Air flow due to the force of the wind (Q,)

When the wind blows against the door, air flows through the opening. The flow of air is distributed uniformly across the entire opening. The quantity of air that flows is therefore proportional to the component of the wind speed that is perpendicular to the door. (After a certain time, the environment will reach a value of overpressure such as to reduce the flow of air to just the level of the leakages from the room).

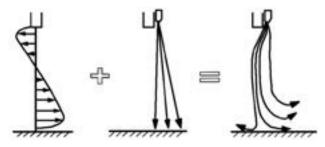

Total air flow (Q_{tot})

The total air flow through an opening is equal to the sum of the flows due to the temperature difference and the flow due to the force of the wind.

Operating principles of a door curtain

Door curtains are used to prevent cold air from entering an environment and the loss of hot air to the outside.

They are also used to protect air conditioned rooms and cold stores against the entrance of hot air and losses of cold air.

A door curtain creates a barrier across the open door, preventing unwanted currents of air.

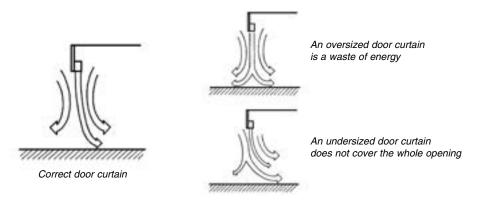

The speed of the air created by the door curtain must be high enough to force the resulting flow downwards.

The door curtain should be aimed so that only a small part of the air is lost to the outside, keeping the cold air on the outside, following the air barrier, while the hot air remains inside the environment.

Criteria for selecting a door curtain

It is important to choose the most appropriate model.

The height of the door is a critical factor, as is the correct setting of the air speed.

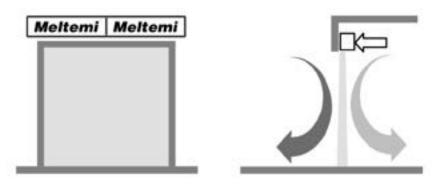

If there is a negative pressure inside the environment, the performance of the door curtain will be substantially reduced: the ventilation should be balanced.

In most cases, the door curtains must be installed on the inside of the opening that is being protected. Nonetheless, when having to protect a cold room, the curtain must be located on the warmer side, that is, the outside of the opening.

For best performance, the door curtain should be located as near as possible to the opening, and cover the entire width of the door.

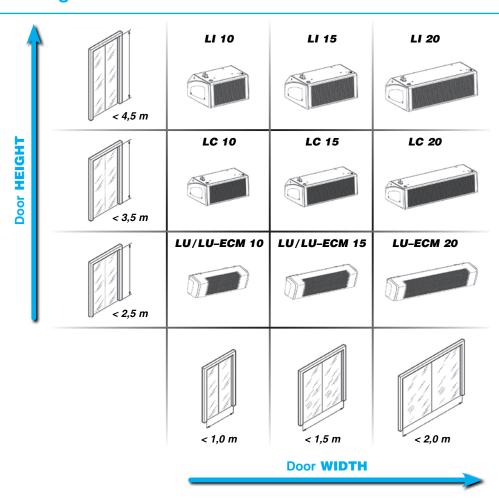

The direction and speed of the air barrier should be adjusted according to the characteristics of the door compartment. The pressure generated by the wind tends to cancel the effect of the door curtain, forcing the curtain of air produced back inside the room. In these situations, the door curtain should be inclined towards the outside.

Tips for choosing the unit

The LU/LU-ECM series door curtains have been designed for installation near small entrances of offices and commercial environments.

The unit comes with integrated control system specifically designed for every type of operation:

LU-A: air operation only, it is equipped with a control located on board, which can be easily accessed from the bottom. This includes a step-by-step control button to switch the

device on and off and select the air speed.

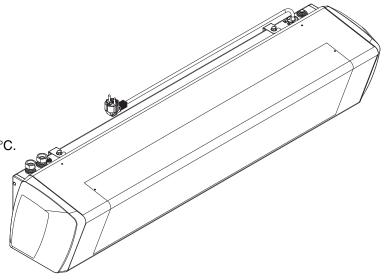

LU-ECM-A: air ventilation only. It is equipped with a remote control system (supplied with the unit) or it can be combined with a wall mounted T-MB control with display (accessory).

LU-W/E and LU-ECM-W/E: operation with hot water or electric coil. It is equipped with a remote control system (supplied with the unit) or it can be combined with a wall mounted T-MB control with display (accessory).

The controls are provided with door contact connection or with ON/OFF remote control.

Product specification:

- Integrated control (LU-A).
- Remote control (LU-W/E and LU-ECM-A/W/E).
- 2 speed fan.
- 2 stage electric coil.
- Wall brackets included.
- 230 V output to control an ON/OFF valve.
- Models with electric resistance are equipped with two safety thermostats; the first, with automatic reset, is set at 45°C, while the second, with manual reset, is set at 80°C.

Recommended installation height: 2.5 metres

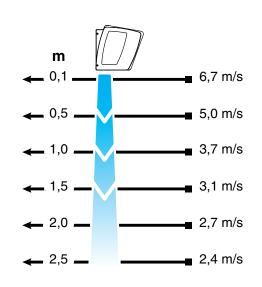

Installation: horizontal

Lengths available: 1, 1.5 and 2 metres

Electric resistance: LU/LU-ECM-10E 3 kW 230V 1 Ph or 400V 3 Ph LU/LU-ECM-15E 6 kW 400V 3Ph **LU-ECM-20E** 6 kW 400V 3Ph

Installation notes

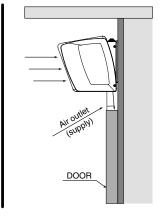

In order to allow suitable space for maintenance, but above all to guarantee the correct operation of the door curtain, the distance indicated must be observed.

The product, in addition, must not be installed in plenums or false ceilings without adequate air intake.

<u>Distance that must be guaranteed</u> for the correct operation of the door curtain

Water side pressure drop - W series with hot water coil

The water pressure drop figures refer to a mean water temperature of **50°C**; for different temperatures, multiply the pressure drop figures by the correction factors **K**.

| °C | 35 | 40 | 50 | 60 | 70 |
|----|------|------|------|------|------|
| K | 1,09 | 1,06 | 1,00 | 0,94 | 0,88 |

Controls supplied as standard

Control system LU-A

The units are equipped, as standard, with electronic board to manage:

- High/Low speed ON button.
- ON indication and failure LED.
- Terminals for "Door Contact" external connection.
- Terminals for connecting a remote ON/OFF switch.
- Dip switch to set the post-ventilation delay time of the door closure fan.

Control system LU-W/E and LU-ECM-A/W/E

The units are equipped, as standard, with electronic board, receiver unit for remote control and RR03-LU remote control to manage:

- ON/OFF unit.
- Fan speed selection.
- Water valve ON/OFF actuator ("W" version).
- Activation of the electric resistance 1st and 2nd stage ("E" version).
- Door interlock.
- Remote ON/OFF interlock.

Several units can be controlled in Master/Slave mode.

The units can be managed by the T-MB control (accessory).

RR03-LU infra-red remote control

The infra-red remote control allows you to set the door curtain operation parameters from a remote position. The **RR03-LU** infra-red remote control features the following functions:

- Switch the appliance ON and OFF.
- · Temperature set.
- Set the fan speed (low or high).
- Set the operation mode (fan only, heating or 1st - 2nd stage for the model with electric resistance).
- Time setting.
- 24 hours ON/OFF program.

Accessories

T-MB wall control

Wall control with display that allows controlling one or more units in Master/Slave mode.

The control is equipped with internal sensor to detect the room temperature, which can be defined as a priority compared to the return air sensor on the door curtain.

The **T-MB** control features the following functions:

- Switch the appliance ON and OFF.
- Temperature set.
- Set the fan speed (low or high).
- Set the operation mode (fan only, heating or 1st - 2nd stage for the model with electric resistance).
- Time setting.
- Weekly ON/OFF program.

Door contact sensor kit

As soon as the door is open, the DSC door switch provides the consent for the air curtain operation (ventilation, valve opening, internal resistance supply) and denies it as soon as the door is closed.

In order to prevent the product from continuous start-stops and motor stress, you can set post-ventilation of 30, 60 or 90 seconds with specific DIP switches in rooms with frequent door opening-closing operations.

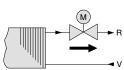

Three way ON-OFF valves with electric control

| 9039035 | 25 (1") | 5,2 | 60 | 80 |

The \boldsymbol{LC} door curtains are intended to be installed near entrances of shops or shopping centres.

The unit comes with integrated control system specifically designed for every type of operation or without control.

Model with integral control

LC-A: ventilation only, it is provided with wall mounted remote control.

The control allows to switch the door barrier on and off and to set the speed required (high or low) by pressing a step-by-step button.

LC-W/E: operation with hot water or electric coil.

The unit comes with remote control with T-MB wall mounted display.

The controls are provided with door contact connections or with ON/OFF remote control.

- Remote control (LC-A).
- Power board installed on board and remote control (LC-W/E).
- 2 speed fan.
- Auxiliary fan motor supply relay.
- 2 stage electric coil.
- Master/Slave connection of several units.
- 230 V output to control an ON/OFF valve.
- Models with electric resistance are equipped with two safety thermostats, the first, with automatic reset, is set at 45°C, while the second, with manual reset, is set at 80°C.

Model without control

LC-AS: ventilation only.

LC-WS: operation with water.

Product specification:

- Wiring terminal board.
- 2 speed fan.
- WM-3V speed control (accessory).

Recommended installation height: 3.5 metres

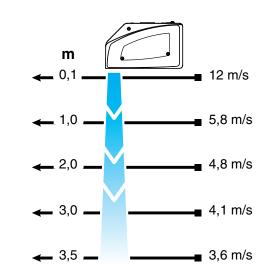

Installation: horizontal

Lengths available: 1, 1.5, and 2 metres

Electric resistance:

| Κ | 1,09 | 1,06 | 1,00 | 0,94 | 0,88 |

Controls supplied as standard

Control system LC-A

Wall-mounted remote control (provided as standard):

- High/Low speed-Standby ON button.
- ON indication or Standby LED.
- "Door Contact" external connection terminals.
- Terminals for connecting a remote ON/OFF switch.
- Dip switch to set the post-ventilation delay time of the door closure fan.

Control system LC-W and LC-E

The units are equipped, as standard, with electronic board and T-MB control to manage:

- ON/OFF unit.
- Fan speed selection.
- Operating mode selection (ventilation only or with heating coil).
- Air temperature set-point configuration.
- Water valve ON/OFF actuator ("W" version).
- Activation of the electric resistance 1st and 2nd stage ("E" version).
- Door interlock.
- Remote ON/OFF interlock.

Several units can be controlled in Master/Slave mode.

Dimensions: 110x72x25 mm

T-MB wall control

Wall control with display that allows controlling one or more units in Master/Slave mode.

The control is equipped with internal sensor to detect the room temperature, which can be defined as a priority compared to the return air sensor on the door curtain.

The **T-MB** control features the following functions:

- Switch the appliance ON and OFF.
- · Temperature set.
- Set the fan speed (low or high).
- Set the operation mode (fan only, heating or 1st 2nd stage for the model with electric resistance).
- Time setting.
- Weekly ON/OFF program.

Accessories

MV-3V wall control (for LC-AS and LC-WS models without control)

- Manual 3 speed switch.
- Without thermostatic control.
- It does not control the valves.

Door contact sensor kit

As soon as the door is open, the DSC door switch provides the consent for the air curtain operation (ventilation, valve opening, internal resistance supply) and denies it as soon as the door is closed.

In order to prevent the product from continuous start-stops and motor stress, you can set post-ventilation of 30, 60 or 90 seconds with specific DIP switches in rooms with frequent door opening-closing operations.

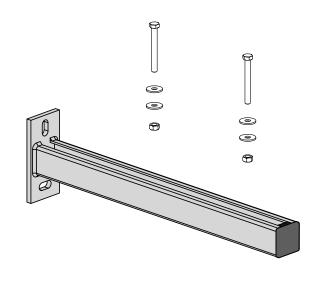

Suspension brackets kit

The Kit consists of brackets (2 brackets for sizes **LC-10** and **LC-15** and 3 brackets for size **LC-20**) and of the fixing elements (except wall fixing plugs).

| Size | IDENTIFICATION | CODE | |
|-------|----------------|------|---------|

Plenum for concealed installation with aesthetic frame

The plenum with aesthetic frame allows the concealed installation of the LC Curtain model. Thanks to this option, the Air Curtains do not interfere with the harmony of the ambient where they are installed.

Completely integrated in the ceiling, the Plenum for concealed installation is separately supplied and it includes the aesthetic frame, the screws and the fixing brackets.

Both the Plenum and the aesthetic frame are made of galvanized steel, finished with epoxy-polyester painting, RAL 9016.

In any case, on site it is possible to repaint the entire frame in the same color of the ceiling.

The **LI** door barriers are intended to be installed near industrial entrances or doors, i.e. wherever the installation height must be up to 4.5 metres (maximum).

The unit comes with integrated control system specifically designed for every type of operation or without control.

Model with integral control

LI-A: ventilation only, it is provided with wall mounted remote control.

The control allows to switch the door barrier on and off and to set the speed required (high or low) by pressing a step-by-step button.

LI-W/E: operation with hot water or electric coil.

The unit comes with remote control with T-MB wall mounted display.

The controls are provided with door contact connection or with ON/OFF remote control.

Product specification:

- Remote control (LI-A).
- Power board installed on board and remote control (LI-W/E).
- 2 speed fan.
- Auxiliary fan motor supply relay.
- 2 stage electric coil.
- Master/Slave connection of several units.
- 230 V output to control an ON/OFF valve.
- Models with electric resistance are equipped with two safety thermostats, the first, with automatic reset, is set at 45°C, while the second, with manual reset, is set at 80°C.

Model without control

LI-AS: ventilation only.

LI-WS: operation with water.

Product specification:

- Wiring terminal board.
- 2 speed fan.
- WM-3V speed control (accessory).

Recommended installation height: 4.5 metres

Installation: horizontal

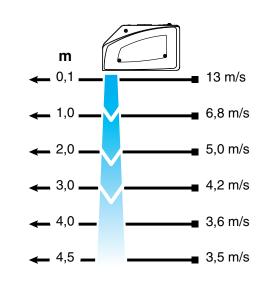

Lengths available: 1, 1.5, and 2 metres

Water side pressure drop - W and WS series with hot water coil

The water pressure drop figures refer to a mean water temperature of **50°C**; for different temperatures, multiply the pressure drop figures by the correction factors **K**.

| Ç | 35 | 40 | 40 50 | | 70 | |
|---|------|------|-------|------|------|--|
| K | 1,09 | 1,06 | 1,00 | 0,94 | 0,88 | |

Controls supplied as standard

Control system LI-A

Wall-mounted remote control (provided as standard):

- High/Low speed-Standby ON button.
- ON indication or Standby LED.
- "Door Contact" external connection terminals.
- Terminals for connecting a remote ON/OFF switch.
- Dip switch to set the post-ventilation delay time of the door closure fan.

Control system LI-W and LI-E

The units are equipped, as standard, with electronic board and T-MB control to manage:

- ON/OFF unit.
- Fan speed selection.
- Operating mode selection (ventilation only or with heating coil).
- Air temperature set-point configuration.
- Water valve ON/OFF actuator ("W" version).
- Activation of the electric resistance 1st and 2nd stage ("E" version).
- Door interlock.
- Remote ON/OFF interlock.

Several units can be controlled in Master/Slave mode.

Dimensions: 110x72x25 mm

T-MB wall control

Wall control with display that allows controlling one or more units in Master/Slave mode.

The control is equipped with internal sensor to detect the room temperature, which can be defined as a priority compared to the return air sensor on the door curtain.

The **T-MB** control features the following functions:

- Switch the appliance ON and OFF.
- · Temperature set.
- Set the fan speed (low or high).
- Set the operation mode (fan only, heating or 1st 2nd stage for the model with electric resistance).
- Time setting.
- Weekly ON/OFF program.

Accessories

MV-3V wall control (for LI-AS and LI-WS models without control)

- Manual 3 speed switch.
- Without thermostatic control.
- It does not control the valves.

| IDENTIFICATION | CODE |
|----------------|---------|
| WM-3V | 9066642 |

Dimensions: 75x75x30 mm

Door contact sensor kit

As soon as the door is open, the DSC door switch provides the consent for the air curtain operation (ventilation, valve opening, internal resistance supply) and denies it as soon as the door is closed.

In order to prevent the product from continuous start-stops and motor stress, you can set post-ventilation of 30, 60 or 90 seconds with specific DIP switches in rooms with frequent door opening-closing operations.

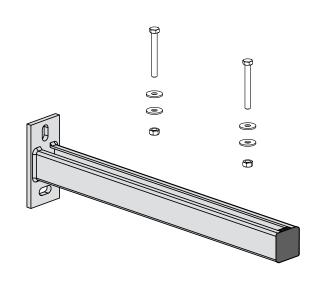

Suspension brackets kit

The Kit consists of brackets (2 brackets for sizes **LI-10** and **LI-15** and 3 brackets for size **LI-20**) and of the fixing elements (except wall fixing plugs).

| Size | IDENTIFICATION | N. of Brackets | CODE |
|-------|----------------|----------------|---------|
| LI-10 | ST-LI-10/15 | 2 | 9042093 |
| LI-15 | ST-LI-10/15 | 2 | 9042093 |
| LI-20 | ST-LI-20 | 3 | 9042094 |

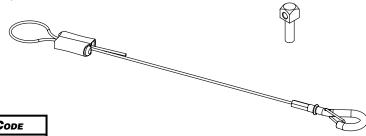

Accessories

Suspension bracket kit with wires

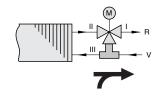

The Kit consists of steel wires with hook (4 wires for sizes **LI-10** and **LI-15** and 6 wires for size **LI-20**) and of fixing eye-bolts (except ceiling fixing elements).

| Size | IDENTIFICATION | N. of Wires | CODE |
|-------|-----------------|-------------|---------|
| LI-10 | CAV-LC/LI-10/15 | 4 | 9042095 |
| LI-15 | CAV-LC/LI-10/15 | 4 | 9042095 |
| LI-20 | CAV-LC/LI-20 | 6 | 9042096 |
